

# EduLink One++

## Step 1. Installation

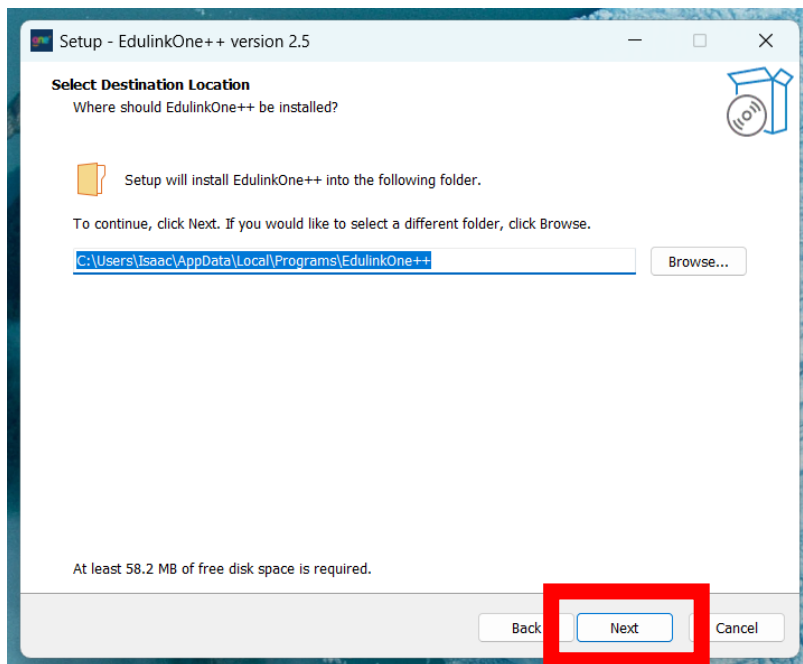

Download the file “EduLinkOne++-Installer.exe” and open it

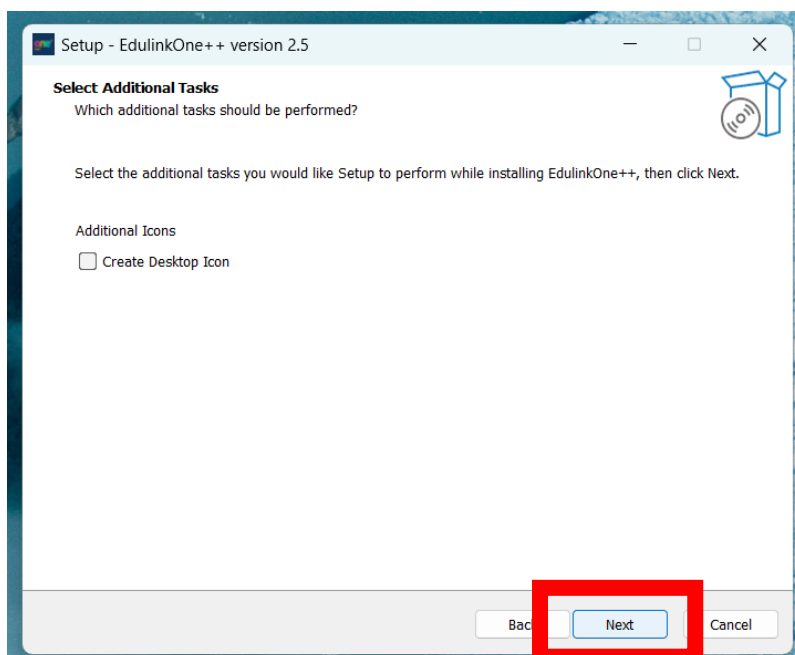

Once opened, this window will appear. Select “Install for me only” as the other option requires admin permission and breaks the app.

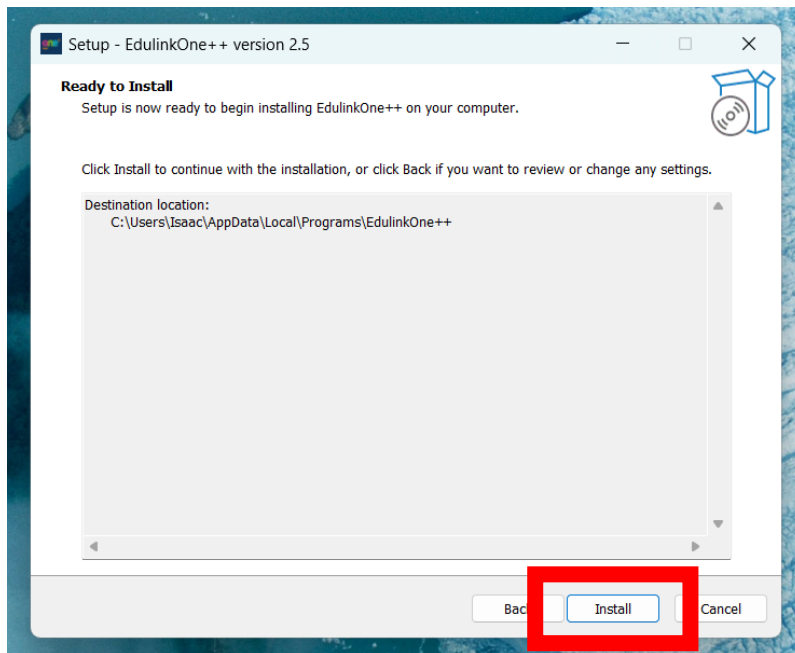

Next a license agreement will show – this is more of a joke than anything I got ChatGPT to write it. Select accept the agreement and then press next to move to the next screen.

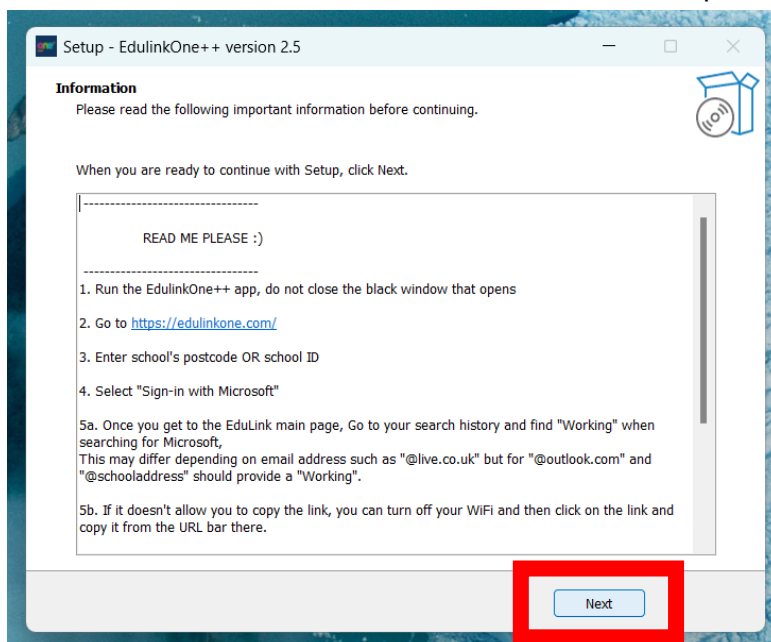

Now it will ask where you want to install it. I would recommend to everyone that you leave this as is and press next.

If wanted, you can make a Desktop icon here but it is unnecessary as we will put it on your taskbar. Press the checkbox if you want or just press next.

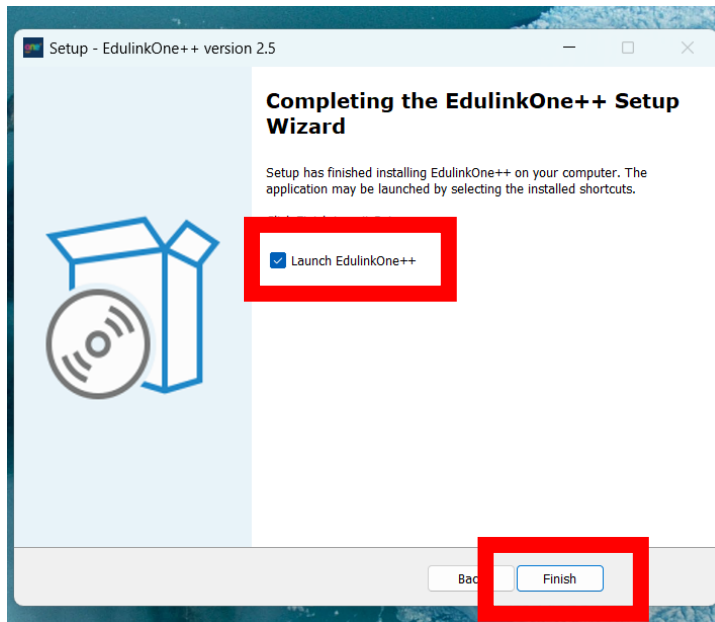

Now click the “Install” button and wait for it to complete.

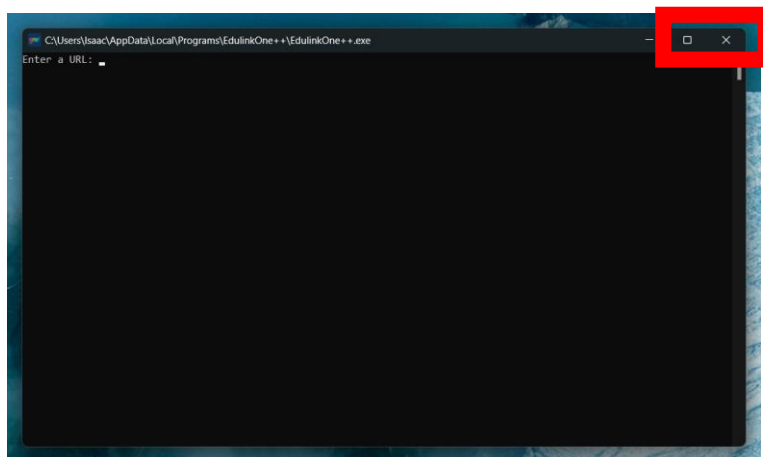

This screen means that it has been installed and you can ignore the text on here as I will explain how to use it in the next step. Simply press next.

## Step 2 – Setup

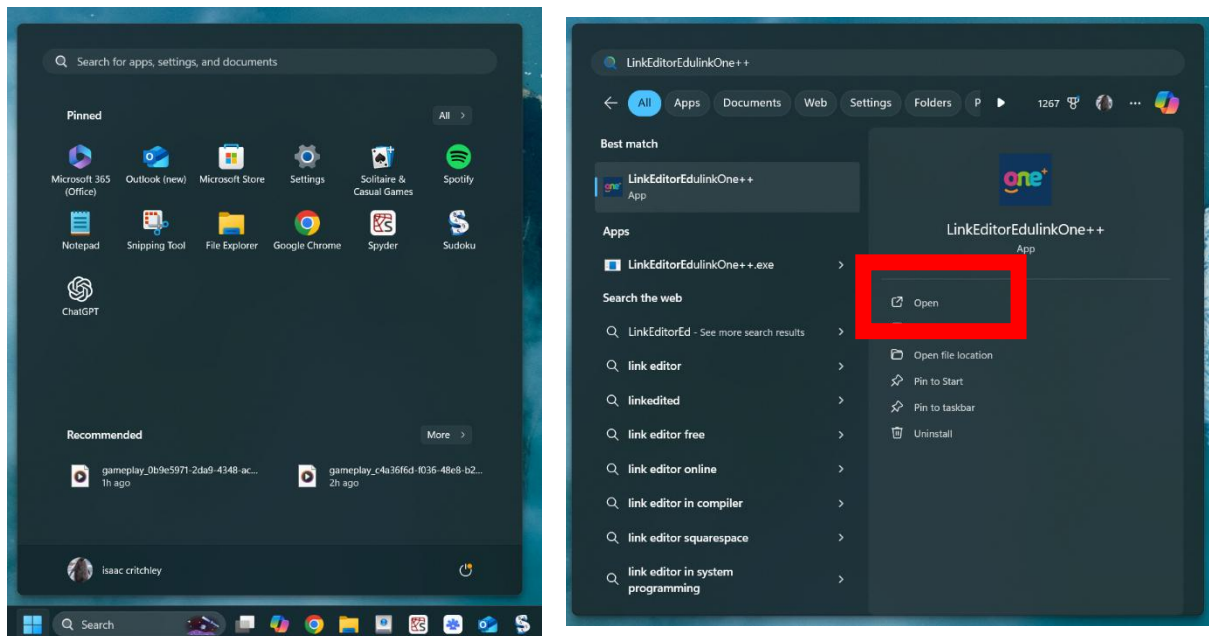

### Part A – Opening the app

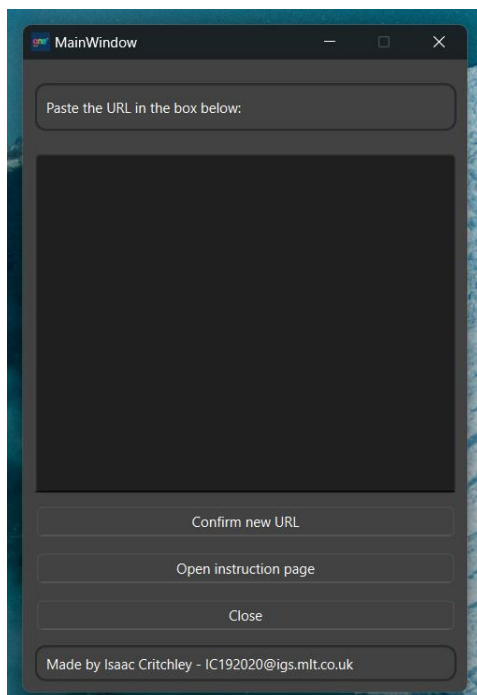

If you have completed step one correctly this screen should appear, check that “Launch EdulinkOne++” is not selected unlike this screenshot and press finish.

This slightly scary looking screen will open if you didn't deselect the checkbox which just means that no URL has been added to the app yet, you can ignore the screen and close it as we will add the URL now.

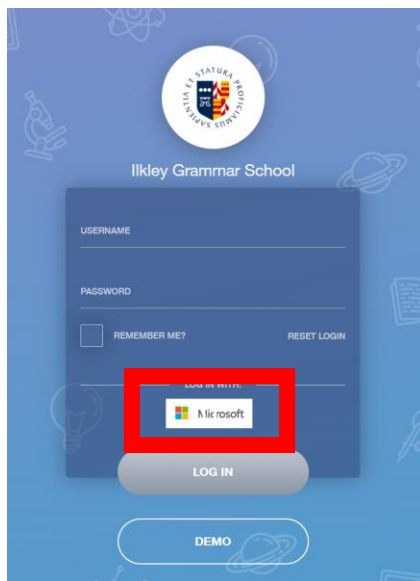

Open the start menu by pressing the windows button on your keyboard and search for “LinkEditorEduLinkOne++” by typing or clicking the search bar at the top of the window. When it shows up click it to open.

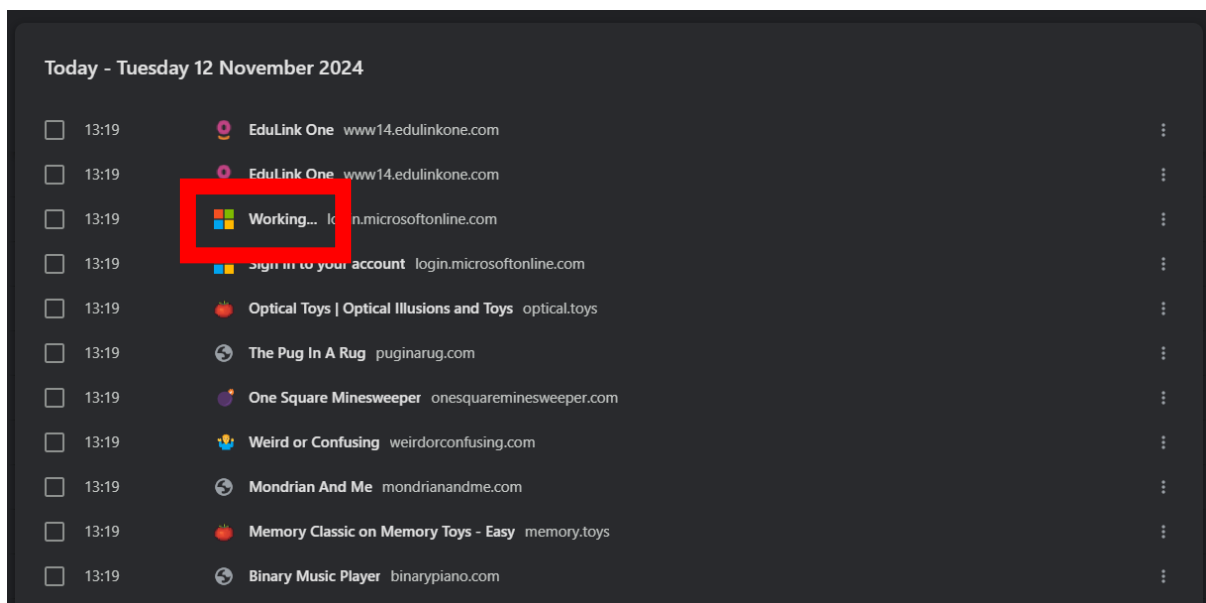

This window will open and you will be able to add a link here. You can leave this screen for now.

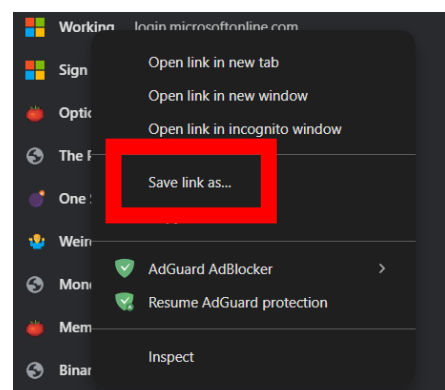

## Part B – Finding your link

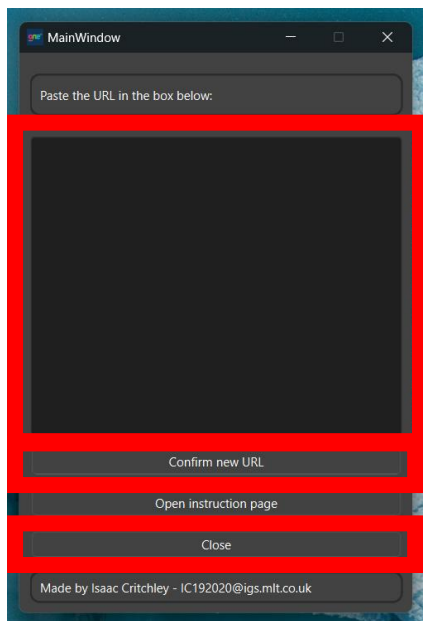

Open [EduLink](#) and sign in like normal with your Microsoft account. Once at the EduLink Homepage open your history by pressing “Ctrl + H”.

In your history find the site that says “Working...”, right click it (make sure it’s the actual word that says “working...” and not the bit next to it) and press “copy link address”

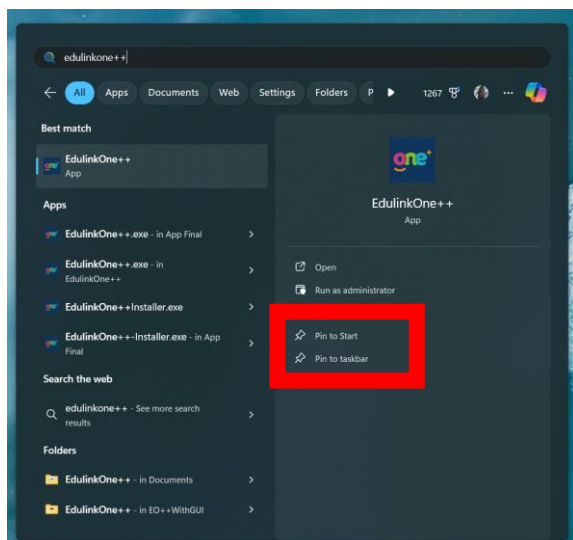

Now go back to the link editor app.

Click the large dark area in the middle of the window and paste the link you copied here (Ctrl + V)

Then press “Confirm new URL”. And finally press “Close”.

## Step 3 – Using the app

Open the start menu and search for “EduLinkOne++”.

Press these two buttons “Pin to task bar” (This will add an icon to the bottom bar of your screen) and “Pin to Start” (This will add an icon to the menu that opens when you press the windows key).

Now, simply open the app and it should take you straight into edulink (You may need to select your account once to activate the link).

And done every time you enter this app it should open edulink in your default browser.
